Moain Al-Abbasi

Software Engineer · Full-Stack, Applied AI & Security

PROFILE

Software engineer who builds complete business systems end to end, from database design to the last screen, and ships them to production. I have built and delivered 10 systems, with **518 commits, 51 database migrations and 128 automated test files** that anyone can count in the repositories. My work includes POS/ERP, attendance, notification and remote-access platforms, offline-first mobile apps, and Arabic-first AI tools. I also build fast, SEO-focused websites for Saudi businesses. I have worked remotely with clients in Saudi Arabia and Yemen, write native Arabic RTL interfaces, and give clients full ownership of their code.

CORE SKILLS

Languages	TypeScript, JavaScript, Python, Go, Dart, Kotlin, PHP, SQL, PL/SQL
Backend	NestJS, Node.js, Hono, FastAPI, Prisma, Drizzle, REST APIs, BullMQ/Redis, Socket.IO, MCP servers
Frontend	React 19, Next.js, Angular 22, Vite, Tailwind CSS, PWA/offline-first (IndexedDB), RTL & accessibility (WCAG AA)
Mobile	Flutter (Android, offline, barcode/ML Kit, Bluetooth printing), native Android with Kotlin + Jetpack Compose
Data	PostgreSQL, Oracle, MySQL, SQLite, data migration from legacy/closed systems
AI	LLM integration, LangGraph agents, Arabic NLP & retrieval (BM25, n-grams, RRF), OCR pipelines, AI-assisted engineering
Security	SOC with Wazuh SIEM, Suricata, YARA, digital forensics (Autopsy, FTK Imager), Zero-Trust remote access
DevOps & QA	Docker, GitHub Actions CI/CD, Cloudflare (Pages/Workers/R2), Vercel, VPS; Vitest, pytest, Playwright, mypy strict
Web growth	Technical SEO/GEO, Core Web Vitals, Google Search Console, Google Ads API, CRO, PDPL compliance

EXPERIENCE

Founder & Lead Software Engineer — Alabbasi Tech (software house) 2026 – Present · Remote

I design, build and deliver custom systems that replace closed, per-seat software. Clients get the full source code, Arabic documentation and three months of support.

- **POS / ERP (replaces YemenSoft Onyx Pro):** inventory, purchasing, accounting and cashier, with migration from the client's existing database. NestJS 10, React 19, Oracle PL/SQL. 170 commits, 33 migrations, 57 test files. Prints Arabic receipts on a Bixolon thermal printer over Bluetooth (Web Serial).
- **Multi-tenant notification platform:** queued, real-time message delivery with delivery reports and a native Android app. NestJS 11, Prisma 6, BullMQ, Redis, Socket.IO, Kotlin.
- **Enterprise attendance system:** reads ZKTeco iFace950 fingerprint devices directly instead of the vendor software, combines branches into one system and produces payroll-ready reports. Go, PostgreSQL.
- **Zero-Trust remote-access platform:** digitally signed agents, per-user access policies and a full audit log for every session, with no permanent keys. Go, SSH, NetBird mesh, cross-platform CLI.
- **Event & hospitality management PWA:** events, staff, inventory, invoices and statements, and it keeps working at venues with no internet. Angular 22, IndexedDB. 32 services, 24 test files.
- **Legacy ERP modernisation:** analysed a PHP/MySQL accounting system and began building a modern NestJS/Prisma/React layer around it, so the business never has to stop for a rewrite.
- **AI business agent:** handles requests and connects internal systems using a state graph. FastAPI, LangGraph, OpenAI.

Web Engineer & Growth — Saudi hospitality clients, Jeddah (remote) 2026 – Present

- Built and run production websites (keifaldiafa.com, asoulaldiafa.com, qahwajeen.com) with Next.js and Hono, with technical SEO/GEO, CRO and PDPL compliance.
- **Results measured in Google Search Console:** click-through rate rose from 0.4% to 2.1%, and daily search impressions rose from 76 to 556. Lighthouse SEO score is 100 and CLS is 0.
- Built a Google Ads + Search Console monitoring platform (Hono, Cloudflare) and an AI content-publishing pipeline in which every post needs approval before it goes live.

SELECTED PROJECTS

Basira — basirapp.site · Checks Quran and Hadith quotations against licensed source texts (71,987 records), shows the exact source letter by letter, and uses an AI model only to propose matches. **150/150** on the evaluation set, **0/500** false alarms, **78.54%** on IslamicEval 2025 (subtask 1B), **487 tests**. Available as a REST API, an MCP server and a Telegram bot. Entry to the *AI in Service of Islamic Content Challenge 2026*. Python, FastAPI, React.

Idhaat — Live-tutoring platform. Zoom rooms are assigned automatically, with a private Jitsi stream (JWT-protected) when rooms run out. Recordings upload to Cloudflare R2 during class, carry a moving watermark and are deleted after 48 hours. Includes homework, messaging and full course finances. Runs for about 25 SAR a month. TypeScript, PWA.

Grocery Ledger (Flutter, Android) — Offline accounting app and POS for small shops, with camera, USB or Bluetooth barcode scanning and append-only ledgers. 157 passing tests, released as v2.2.1. **Sijil**: an offline debt ledger for shops (93 tests).

S-ACM — Academic content-management system with AI summarisation and question generation. React 19, Hono, PostgreSQL, Drizzle. **Ghaida**: multilingual household guide with AI voice for domestic workers, as an offline PWA (API tests 27/27).

Security Operations Center (graduation project) — Wazuh 4.14.7, Suricata, YARA, VirusTotal, auditd and MikroTik syslog, plus an AI analyst. 14 use cases verified on a live lab, including automatic blocking of SSH brute-force attacks. Also a **digital forensics lab** (Autopsy, FTK Imager, registry and event logs).

LANGUAGES

Arabic: native · English: professional (technical)

WORKING STYLE

Fixed-scope written quotes · phased delivery · client owns the code · documentation in Arabic and English · available during Saudi business hours
